

Proteus Editor 2.4.1 Beta release software

February, 2006

This software includes the following changes from ProtEd version 2.3:

1) When downloading sessions or albums into Proteus, use the "dL" mode as in pre-2.3 versions; version 2.3 required using the "PC" mode.

2) In AudioStrobe ("AS") mode you can press the bottom button to keep the system on indefinitely. The display shows "AS_" when it is in this "always-on" state.

This feature prevents the Proteus from shutting off the power automatically and is useful for longer AudioStrobe CD listening experiences.

3) There is no longer a pop-up text box when you edit segment parameters. You either edit the values directly in the text boxes or you can use the scroll bar.

This should remedy the input problems which can occur in countries where a "," is used as a decimal point "."

3a) Also, when setting the incremental values that are used with the scroll bar, the use of left/right arrow keys and shift keys has been modified as follows...

	default (min. increment)	<CTRL> key	<SHIFT> key	<SHIFT> and <CTRL> keys
FUNCTION				
LF Frequency	0.1 Hz	1.0 Hz	10 Hz	25 Hz
Brightness	1	3	5	15
Sound Pitch	10 Hz	50 Hz	100 Hz	300 Hz
Time	0.5 sec.	1 sec.	10 sec.	1 min.

If you find any errors in the operation of this software, please contact Todd Stone, todd@mindplace.com.

Enjoy!
